Acknowledgements
(who you would like to thank for helping with project and why)
It should not be just a list of names.

ACKNOWLEDGMENTS

I would like to thank the members of my family who assisted me with this project: my mother, who copy edited my report, and my father and sister, who assisted in the construction of the display board.

A special note of thanks to Dr. Taylor Bolden, professor of entomology at MaKenzie University, and to Christopher Eugene, his assistant, for their expert guidance.
The purpose of this project is to determine if all canned sodas have the same density as water. If canned sodas are placed in an aquarium filled with water, then all the sodas will sink, because they all have a density greater than water. All of the diet sodas floated when placed in room temperature tap water. All of the regular sodas sank to the bottom of the aquarium filled with room temperature water. There was one exception, the Dr. Pepper floated. I would need to conduct an additional experiment to determine why this can floated. Based on this data, my hypothesis was not supported.
Write an Abstract

An abstract is an overall summary of the experiment. It is a shortened version of the entire research paper. The following format should be used:

TITe (all Capitals)
Last name, First name, Middle initial

1. Type single spaced.
2. Use the preset margins of left and right at 1.5” and top and bottom at 1.5 “. Maximum size for type or font is 12 pts.
3. The abstract is a summary of the project. The abstract should be about 250 words. It should include:
   - The purpose
   - The hypothesis
   - A summary of the research and experimental design*
   - A brief description of the results*
   - The conclusion*
4. The abstract is to be written in third person. This means no use of the words “I”, “my”, “you”, etc. Instead, use phrases such as “he discovered” rather than “I discovered”.
5. The abstract should be displayed with the project board. (For those students doing a board – See layout provided on SharePoint.)

* The information for these two paragraphs could be a copy and paste set up from your research paper and/or data analysis.
